**Sample Job Descriptions**

**Analyst – Hubbard Decision Research**

Level 1 Analyst: A level 1 analyst is qualified to assist on risk/return analysis project and AIE implementation projects. The level 1 analyst can build decision models, run Monte Carlo simulations, compute information values, and execute empirical studies. They understand various financial analysis techniques and sampling methodologies. A level 1 analyst works under the supervision of a level 2 analyst. Certification requires completion of level 1 training, a score of 85% on the Level 1 Written Exam covering the AIE process and financial and statistical methods, and completion of the Level 1 Practical Experience Checklist.
Level 2 Analyst: A level 2 analyst is qualified to manage a risk/return analysis project and supervise level 1 analysts in risk/return analysis projects. They may provide supervised assistance on AIE implementation projects. The level 2 analyst has more advanced skills in financial, management science and statistical methods. Certification requires completion of all level 1 requirements, completion of level 2 training, a score of 85% on the Level 2 Written Exam covering the AIE process and financial and statistical methods, and completion of the Level 2 Practical Experience Checklist.

Level 3 Analyst: A level 3 analyst is qualified to manage any type of AIE project, including risk/return analysis projects and AIE implementation projects. They have the background to run advanced and special case types of AIE analysis. They are authorized to approve items for level 1 and 2 practical experience checklists and they are qualified to conduct level 1 and 2 training. They are authorized to be auditors of AIE deliverables. Certification requires completion of all level 1 and 2 requirements, a score of 85% on the Level 3 Written Exam and completion of the Level 3 Practical Experience Checklist.

Level 4 Analyst: A level 4 is qualified to be a member of the AIE Certification Board where training, experience and certification standards for all levels are determined. Level 4 certification requires special appointment by the AIE Certification Board. The AIE Certification Board will consider such accomplishments as innovative work, publications, experience in all types of AIE projects, and recommendations from clients. Level 4's are expected to be developing new techniques and contributions to the AIE body of knowledge.

E-Business Consultant - Company: Dell Financial Services
Creates, maintains, and ensures optimization of site content to drive customer acquisition, retention, and development. Assessment of current site traffic, market trends & best practices to help build and enhances DFS web sites. Prefer 4-6 years customer usability, user interface software design, Degreed!

Satisfaction Research Analysts (SRA) and Team Leads – Foresee Results
The SRA is the main point of contact for our customers after the sale of our service. The SRA is responsible for presenting our clients with their website customer satisfaction analysis. This includes working with clients to establish surveys and providing analysis of the customer satisfaction results to the client on an ongoing basis. The SRA is responsible for maintaining a strong relationship with our clients.

The SRA Team Lead manages a team of analysts in a particular industry segment. The SRA Team Lead works closely with their team and multiple clients to accomplish successful client services.

Both positions require at least five years of experience in market research including preparing surveys, analyzing data, and presenting to clients. The Team Lead position requires additional direct management experience of five or more direct reports in a fast-paced environment. Multiple positions are open at our office in Ann Arbor, Michigan.

Senior Technical Product Manager - PayPal
We are recruiting for a Senior Technical Product Manager in the Checkout TPM team in Merchant Services with a focus on integrating incentives. The team collaborates closely with cross-functional product teams to specify and develop products that meet the needs of PayPal's growing community of merchants from sole proprietors to some of the world's largest eCommerce players. These solutions envision the current and future architecture of the PayPal system, considering the requirements of our customers as well as those of supporting organizations such as Customer Support, Legal, Security and Site Operations. Primary Job Responsibilities The technical product
manager (TPM) bridges business and technology, bringing technology to the table during the ideation and definition phases of the product development lifecycle. The TPM role is to effectively address the needs of the business through creative product solutions that optimize engineering resources, system scalability, cost, and time to market. The TPM unique combination of business and technical knowledge is leveraged to quickly evaluate technical options and to represent business requirements to the technology organization. The result is better products faster. Merchant Services TPMs play a strong role in the development of the long term product strategy by providing architectural insight and industry expertise. TPMs and PMMs partner with Engineering to drive the long term product roadmap based on the strategy. TPMs work with PMMs and other business units to prioritize development initiatives and bug fixes, maximizing the effectiveness of allotted development resources. To be successful the TPM maintains strong relationships with business and technology peers. They are experts in their product area. They understand and can balance multiple priorities to create the best overall solutions. To be successful, a TPM needs to be a good communicator and problem solver. They understand and appropriately engage all stakeholders. They are a clear communicator and meet their project milestones.

**Job Requirements:** Minimum 8 years of professional experience (or 6 years with an advanced degree). Possess working knowledge of industry standards and practices. Strong customer focus. Experience working with online merchants, ad networks or shopping carts. Experience with internet marketing platforms for e-commerce is highly desirable. Minimum of 3 years of experience in product management or as a development lead for a web based product Strong business acumen. Exhibits understanding of customer needs, in particular merchants needs, and product intuition. PayPal or other payment or financial services background is a plus. Strong technical background. Minimum 5 years defining and/or developing software products, ideally web products. Must have solid knowledge of the entire PDLC from concept to launch and post-launch analysis. Must have experience in requirements analysis and have the ability to prioritize tasks and tie detailed solutions with business goals Ability to determine impact of architectural solutions and recommendations. Must have experience in justification of technology solutions to business leaders. Highly analytical. Ability to think strategically and to develop comprehensive detailed specifications. Excellent communication skills (oral and written) are a must for articulating the business/PMMs product vision and detailed functional requirements to engineering, as well as architectural requirements and implementation options to the business. Highly effective at working in cross-functional groups and getting results in matrix organizations. Must be comfortable and excel in fast-paced, dynamic environments, with very aggressive project timelines. Education Bachelors Degree Required

---
