ARE YOU PASSIONATE ABOUT IMPROVING HEALTHCARE?

The Health Informatics program at the University of Michigan prepares leaders who tackle issues such as healthcare quality and rising costs through thoughtful application of information technology.

PROMISING CAREER OUTLOOK

MHI graduates work in one of the fastest growing career fields. As health informatics professionals, they assume many unique and important roles.

PROGRAM DETAILS

- Residential/on-campus program
- 52 credits (2 years)
- Required internship (360 hours)
- Open to applicants of all academic backgrounds

$75K
AVERAGE STARTING SALARY

100%
JOB PLACEMENT RATE
WHO SHOULD APPLY?
Health informatics is a highly interdisciplinary field. Applicants come from all academic and professional backgrounds, including social sciences, natural and life science, engineering, business, and health professions.

RELATED FIELDS

Natural science  Social science  Clinical science

Business  Public health

Computer science/ engineering  Information science  Art/design

THE BEST OF BOTH WORLDS
By joining the expertise of the prestigious Schools of Information and Public Health, the MHI program offers a cutting-edge and innovative approach to health informatics:

UMSI
The School of Information is renowned for its curriculum in human-centered design and social computing, training students in the development and evaluation of novel information resources.

SPH
The School of Public Health provides world-class expertise in health policy and health behavior, while training students in a population health perspective.

Together, the schools prepare our graduates to become forward-thinking innovators who revolutionize the way information is used to promote wellness and quality of care.

*US News and World Report rankings

#1 BEST AND MOST COLLABORATIVE US COLLEGE
(HUFFINGTON POST 2013)

“With the MHI program, I will be able to exert a great influence on patients’ lives, even without having a medical degree. The thought of a computer scientist having an impact in the health care industry is really exciting.”
Andy Lee, Class of 2017
Research Intern, Microsoft Medical Devices Group
B.S. Computer Science Engineering

“Health informatics isn’t just about creating health data. It’s about making health data intuitively meaningful for the patient, clinician, or policy maker who needs to act on it.”
Brian Zikmund-Fisher
Associate Professor of Public Health, Research Associate Professor of Internal Medicine

“Health informatics is such a wide open field that innovation is needed. It’s not just limited to one specific field in medicine, but is applicable to community hospitals, physician groups, anyone affected by medical information.”
Danielle Culberson, Class of 2017
Intern, University of Michigan Health System Interpreter Services
BBA Advertising/Marketing
